

Index

Locators shown in *italics* refer to tables.

- abortions
 - controversy surrounding definition and interpretation of, 89
 - impact of social norms on understanding of, 100–104
 - number and reasons in UK, 93–4, 93
- agential realism, 71–3
- amniocentesis
 - history of usage in prenatal screening, 51–3
 - use in detecting risk pregnancies, 53–4
 - use in foetal abnormality detection, 92–3
- analysis, chromosomal
 - history of usage in prenatal screening in Finland, 51–3
- Andrews, P., 188
- animal
 - connectedness with category of human, 184–9, 191–7, 195, 196
- Ankersmit, F., 150
- anthropology
 - concept of ‘personhood’, 32–5
- architecture
 - impact of on ethos and needs of laboratories, 165–7, 165
- artefacts, scientific
 - human biological material as, 17–21
- assemblage (concept), 2, 113, 124, 140
- assessment, prenatal risk
 - as process of ‘mattering’, 83–4
 - case studies of, 80–83
 - relevance of theory of agential realism, 71–3
 - use in Denmark, 70–71, 73–82, 74, 76
 - use of quantification within process of, 77–9
 - see also methods eg* amniocentesis; ultrasound
 - see also outcomes eg* quality-of-life
- Augé, M., 155
- Bachelard, G., 6
- Barad, K., 71–3, 74
- Bentley, M., 149
- Beyleveld, D., 22
- biology
 - Canguilhem’s theories of role of, 6
 - impact on definition of quality-of-life, 94–100, 95, 98
 - see also* human biological material
 - biology, molecular
 - changing nature in relation to understanding of models of human body, 143–5
 - impact on understanding of informational model on human body, 139–41
 - biosociality, 2–3
 - Birth of the Clinic, The* (Foucault), 139–40
 - ‘blackbox’, 6, 122–3
 - blood, 1, 8, 25, 31–46, 49, 69, 79, 92–4, 103, 107, 113
 - as symbol of kinship, 43–6
 - role in interpreting personal identity, 35–8
 - salience in perceptions of foetus and conception, 40–42
 - body, human, 8, 15–29, 31–34, 36, 74–77, 96–97, 115, 129, 135–146, 148–9, 151
 - changing nature of informational model in understanding of, 143–6

- influence of proteomics on
 - understanding, 146–50
- rise of informational model of
 - understanding, 139–43
- use of metaphors to envision
 - functioning of, 137–9
- see also* humans, individual
 - boundary
 - boundary object, boundary work, 4–5, 16, 27, 71, 74, 81, 84, 127, 156, 162, 177
- Bohr, N., 71, 72
- Bowker, G., 4–5
- Brown, N., 2
- Brown, P., 187, 190–91, 194
- Brownsword, R., 22
- Bynum, C., 145

- Canguilhem, G., 6, 94–5
- Carsten, J., 33, 34–5
- Cartmill, M., 199
- categories, life
 - definition and classification of, 4–5
- Chester
 - controversy surrounding case of
 - pregnancy termination in, 89
- choice, informed, 9, 26, 34–5, 43, 49–50, 53–63, 70–1, 82–4, 90–3, 106
 - approach within prenatal screening, 55–9
 - role of citizen education in enabling, 59–62
- chronic villus sampling
 - history of usage in prenatal screening, 51–3
 - use in foetal abnormality detection, 92–3
- citizenship, 2, 21, 55, 59–60, 62
- classification, 4, 7, 17, 24, 27, 100, 118, 168, 183, 199
 - challenges of when using human biological material, 27–9
 - definition and characteristics of
 - concept, 5–6
 - of diseases, 5–6
 - of life categories, 4–5
- Clinton, W (Bill), 141
- Collard, M., 188
- collections, human biological material
 - definition and characteristics, 15–16
- Collier, S., 2
- consent, informed, 3–4, 7, 22, 90
- contestedness
 - contestation / stabilization, 3–6
 - of concepts in epidemiology, 113–4, 118–9
 - of concepts of the body, 137–9, 150–1
 - of human-animal boundary, 181–6, 192–8
 - of informed choice in prenatal screening in Finland, 55–9
 - of laboratory space, 156–7
 - of risk in pregnancy screening, 53–5, 73–4, 79–84
 - of ‘seriousness’ of disease, 90–4
 - within field of human biological materials usage, 23–7
- Cooter, R., 142
- Crick, F., 140
- Cystic Fibrosis, 94–104, 95, 98
 - impact on carers, 104–6
- Cystic Fibrosis Trust, 102, 105

- data,
 - role of and practices with in biomedical sciences 3, 50, 55, 78–9, 84, 94, 113–131, 144, 151, 157, 159, 160
- Darwin, C., 43
- Dawson, C., 182, 185
- Denmark
 - prenatal risk assessment practice, 73–82, 74, 76
 - use of epidemiological studies, 115–29
 - use of prenatal risk assessment in, 70–71
- Derrida, J., 142
- dignity
 - salience within field of human biological material usage, 22–3
- disability and disablement
 - as feature of human biological materials storage and usage, 27–9
 - see also specific disabilities and diseases e.g. Cystic Fibrosis;*

- Down's Syndrome; Spinal Muscular Atrophy
- diseases
- challenge to human lifespan, 97–100, 98
 - classification of, 5–6
 - statistics of, resulting in termination, 95
 - see also* genes and genetics; lifestyles; risk, epidemiological
 - see also name, type and influences*
e.g. Cystic Fibrosis; Down's Syndrome; heart, diseases of; lifestyles; Spinal Muscular Atrophy
- discursiveness
- role in defining understanding of the human body, 145–6
- Donaldson, L., 22
- Douglas, M., 78, 168
- Down's Syndrome, 94–104, 95, 98
- and use of prenatal risk assessment as diagnostic tool in Denmark, 70–71
 - impact on carers, 104–6
- Down's Syndrome Association, 98, 100, 105
- Deleuze, G., 139
- Duster, T., 1
- Earliest Englishman, the* (Woodward), 185
- Ecks, S., 2
- education, citizen
- role in enhancing choice and containing prenatal screening expectations, 59–62
- Elias, N., 177
- entities, scientific and social
- human biological material as, 17–23
- embryo, 3, 26–7, 38–40, 91–4, 99
- environment (concept)
- genes and environment, 9, 36, 114, 123, 126–9, 147
 - role in epidemiological research, 128–9
- epidemiology
- associations of heart disease with lifestyles, 124–5
 - role in risk factors studies, 122–3
 - see also* research, epidemiological; risk, epidemiological
- epistemology, 4, 5, 9, 34, 114, 119, 140, 143
- epistemic space, 156–7, 159, 177
- ethics
- role within prenatal risk assessment, 83–4
 - ethos, laboratory usage
 - impact of architecture and spatiality on, 165–9, 165
 - salience of electronic communication, 173–6, 177–8
 - salience of laboratory scheduling on, 170–72
- experience, lived, 7–8, 35–8, 50, 74–6, 80–4, 91, 145, 149, 156
- experimentation, 6
- experimental practices in the laboratory 155, 159–61, 166–171, 178
 - 'natural experiments' in epidemiological research, 117–19
- Feher, M., 143
- Finland
- contestedness of choice in prenatal screening practice, 55–9
 - contestedness of risk in prenatal screening practice, 53–5
 - history of approach to prenatal diagnosis, 49–50
 - influence of politics and technology on prenatal testing, 51–3
 - role of citizen education in containing screening expectations, 59–62
- foetuses, 3, 26, 31, 38–40, 52–7, 72–84, 89, 93–4
- role of blood and genes within understanding of, 38–43
 - see also* abnormalities, foetal; expectations, prenatal; risk, prenatal; screening, prenatal
- Foucault, M., 139, 141–2, 171

Fragments for a History of the Human

- Body* (Feher), 143
- Franklin, S., 2
- 'free foetal DNA', 92–3
- Fukuyama, F., 1
- genes and genetics
- as symbol of kinship, 43–6
 - changing nature in relation to understanding of models of human body, 143–5
 - characteristics and relationship with DNA, 34–5
 - genetic risk, 3, 62, 128
 - role in interpreting personal identity, 35–8
 - role in understanding of conception, 38–43
 - see also* epidemiology; variations, genetic
- genomics
- changing concepts of the body, 146–7
 - development and role in epidemiology, 122–3
- Gere, C., 16, 21
