

Subject Index

| | |
|------------------------------|-----------------------------|
| Accident model | |
| Cause and effect analysis | 86, 101, 103, 106 |
| Domino model | 103, 119 |
| Root cause | 5, 12, 105 ff, 114 |
| Root cause analysis | 12, 85, 106 ff |
| Time-reliability correlation | 51, 52, 58 |
| Allen, J. F. | 39 |
| Amalberti, R. | 136 f |
| Argyris, C. | 140, 143 |
| | |
| Bateson, G. | 40 |
| Bernstein, P. L. | 39 |
| Bimodal principle: | 94 ff, 122 f, 128, 131, 136 |
| BP Texas City | 85 |
| | |
| Campbell, D. T. | 101 |
| Chauvin, C. | 83 |
| Checkland, P. | 21 |
| Code of Hammurabi | 3, 4 |
| Cognitive heuristics | |
| Conservative focusing | 34, 37 |
| Focus gambling | 34, 37 |
| Frequency gambling | 34 |
| Judgement heuristics | 37 |
| Representativeness | 34, 36, 109 |
| Schema | 4, 47, 49, 58 |
| Sharpening | 37 |
| Similarity matching | 34 |
| Simultaneous scanning | 34 |
| WYLFY | 1, 85, 101 |
| | |
| Dark matter | 100, 102 |
| Decision-making | 23 ff, 34, 41, 44 f, 47, 68 |
| Elimination by aspects | 33, 40 |
| <i>Homo economicus</i> | 23 ff, 41 |
| Muddling through | 33 f, 44 f, 58, 142 |

| | |
|--------------------------------------|-----------------------|
| Naturalistic decision-making | 33, 46 |
| Prospect theory | 33, 40 |
| Recognition Primed Decision-making | 34, 45 ff, 58 |
| Sacrificing | 42 f, 62 |
| Satisficing | 32 ff, 41 ff, 58, 123 |
| Successive comparison approach | 44 ff |
| Dougherty, E. M. Jr. | 138 |
| | |
| EADS | 51 |
| Emergent effects | |
| Coupling | 54, 86 f, 98 |
| Emergent outcomes | 101, 105 f, 129, 136 |
| Resultant outcomes | 105 f, 136 |
| Error mechanism | 96 f, 100, 113, 133 |
| ETTO examples | |
| Aeronautical data | 70 f, 82, 84 |
| Airac | 71 f, 84 |
| Castrum | 30 |
| Chemotherapy | 73 f, 83 f |
| Clinical trial | 134 |
| COLREGS | 78, 80 |
| Dover strait | 80 |
| English channel, the | 76, 80, 83 |
| <i>Estonia</i> accident | 76 ff, 83 f, 114 |
| Foraging | 29, 40 |
| Full protection | 69 |
| Gardemoen | 63 |
| Give-way | 79 f |
| Hip dislocation | 118, 120 |
| London bombings | 83 |
| Mars | 80 ff |
| MI5 | 66 ff |
| NASA | 82 |
| National Transportation Safety Board | 48 f, 58 |
| Radioactive material | 64 |
| Reverse fuel | 75 f |
| Roll-on roll-off | 76 f |
| Roman army | 30 |
| Stand-on | 79 |

| | |
|--------------------------------------|--|
| <i>Subject Index</i> | 147 |
| Terrorism | 11, 68, 69 |
| Tokyo gas attack | 11, 20 |
| Unmanned aircraft | 48, 58 |
| Zeebrugge | 76 |
| ETTO principle | 28, 37 ff, 55, 62, 66, 109, 133 f |
| ETTO rules | |
| Double-bind | 39, 40, 73 |
| I am not an expert on this | 36 |
| I cannot remember how to do it | 36 |
| If you don't say anything | 125 |
| It has been checked earlier | 71 f, 74 |
| It is good enough for now | 64 |
| It is normally OK | 83 |
| It is not really important | 118, 126 |
| It looks fine | 74, 117 |
| It looks like 'X' | 47, 117 |
| It must be ready in time | 126 |
| It normally works | 47 |
| It will be checked later | 72 |
| Negative reporting | 38, 83 |
| This way is much quicker | 35, 126 |
| We always do it in this way | 126 |
| We must not use too much of X | 126 |
| | |
| Fragola, J. | 58 |
| Functional Resonance Analysis Method | 120, 136, 143 |
| | |
| Hall, A. D. | 20 |
| Hall, R. E. | 58 |
| Hammurabi | 4 |
| Heinrich, H. W. | 15, 20, 119 |
| High reliability organisation | 19, 123 |
| Hollnagel, E. | 5, 19, 21, 101 f, 119 f, 137 f, 143 |
| Human error | 12, 85, 95 ff, 100, 124, 127, 133, 137 |
| Human Factors | 101, 137 |
| | |
| ICAO | 20, 70, 72 |
| information input overload | 37, 45, 53 f, 125, 141 |
| information pull | 31 f, 37 |

| | |
|-------------------------------|--|
| information push | 31 f, 141 |
| Jacobs, W. W. | 4 |
| Kahneman, D. | 40 |
| Kirwan, B. | 58, 138 |
| Klein, G. | 58 |
| Level of control | 93 |
| Levels of control | |
| Opportunistic control mode | 93, 98 |
| Strategic control mode | 80, 93, 98 |
| Tactical control mode | 93, 98 |
| Lewes, G. H. | 106 |
| Lindblom, C. E. | 44, 46, 58 |
| Mach, E. | 18, 97, 123 |
| Metcalf, N. B. | 40 |
| Miller, G. A. | 1, 4 |
| Miller, J. G. | 53, 59 |
| Murakami, H. | 20 |
| Normal Accident Theory | 5, 7, 19, 86, 101 |
| Nouvel, D. | 120 |
| Nuclear Power Plant | 7, 51, 88, 91, 96, 131 f, 138 |
| Nuclear Regulatory Commission | 65 |
| Organisational learning | 140, 141, 143 |
| Performance variability | |
| Approximate adjustments | 68, 93, 94, 107, 118, 136 |
| Compensatory variability | 93, 98 |
| Contextual variability | 93, 98 |
| External conditions | 92, 116, 122 |
| Performance variability | 5, 85 f, 89, 91 f, 97 f, 101, 127, 129 |
| Teleological variability | 93, 98 |
| Perrow, C. | 3, 5, 7, 19, 86, 101 |
| Piaget, J. | 47, 58 |
| Probability | 23, 52, 81, 83, 100, 108, 123, 128, 130, 132 f, 135, 137 |

- Procedure 45, 63, 68, 73 f, 82, 91, 93, 104, 111, 116, 118
- Rationality 32 f, 39, 41 f, 55
- Raynard, R. 39
- Reason, J. 85, 101, 137
- Resilience engineering 123, 137
- Risk assessment 56, 94, 100, 121 f, 124, 126 ff, 132 f, 136
- Bow-tie 104, 119
 - Event tree 104, 119, 122, 131 f
 - Fault tree 104, 119, 122, 128, 131 f
 - FMECA 94
 - HAZOP 94
 - Human reliability assessment 58, 132 f, 136 ff
 - Probabilistic risk assessment 130 ff, 136, 138
 - WASH-1400 131, 138
- Roberts, K. H. 19
- Safety Assessment Code 108 f
- satisficing 25, 41
- Sawaragi, T. 120
- Scientific Management 50, 139, 143
- Sharp end - blunt end 46, 49, 64, 78, 127, 137
- Simon, H. A. 41 f, 58
- Small world phenomenon 129 f, 137
- Socio-technical system 5, 7, 17 ff, 38, 57, 74, 86 ff, 92, 101, 121, 124
128 ff, 137
- Stop rule 11 f, 16, 49
- Taylor, F. W. 143
- Taylor, J. R. 119
- Things that go right 100, 102
- Things that go wrong 8, 38, 100
- Thoroughness-efficiency trade-off 140 ff
- Three Mile Island accident 58, 96, 132
- Tractability-intractability
- Intractable 42, 46, 56 f, 88, 90, 95, 98 f, 106, 128, 129
 - Predictable 42, 57, 90, 93, 98, 106, 128
 - Tractable 42 f, 56 f, 88, 98 f, 106, 120, 127
 - Underspecification 89, 93, 139
