Hardback

£70.00

Plant genetic diversity is crucial to the breeding of food crops and is therefore a central precondition for food security. Diverse genetic resources provide the genetic traits required to deal with crop pests and diseases, as well as changing climate conditions. Plant genetic diversity is also essential for traditional small-scale farming, and is therefore an indispensable factor in the fight against poverty. However, the diversity of domesticated plant varieties is disappearing at an alarming rate while interest in the commercial use of genetic resources has increased in line with bio-technologies, followed by demands for intellectual property rights.

This important book contributes to our understanding of how international regimes affect the management of plant genetic resources for food and agriculture in developing countries. It identifies entry points to shape a better governance of agrobiodiversity and provides the first comprehensive analysis of how the international agreements pertaining to crop genetic resources affect the management of these vital resources for food security and poverty eradication in developing countries.

Contents

Preface; Part 1 Introduction: Relevance and objectives of the study; Plant genetic resources for food and agriculture: foundations of the topic. Part 2 Research Design: Research questions and analytical framework; Research strategy and methods. Part 3 The Constellations of International Regimes Pertaining to Plant Genetic Resources for Food and Agriculture: The international treaty on plant genetic resources for food and agriculture with the international undertaking on plant genetic resources; The convention on biological diversity; The agreement on trade-related aspects of intellectual property rights and the convention for the protection of new varieties of plants; Regime overlap, interaction and resulting constellations. Part 4 Domestic Responses to the International Regime Constellation Pertaining to Plant Genetic Resources for Food and Agriculture: Cases from The Philippines: Effects in The Philippines; Mechanisms of influence of international regimes: 2 cases. Part 5 Conclusions, Relevance and Challenges: The aggregate effects of international regimes on PGRFA management in developing countries; Implications of the findings and challenges ahead; Bibliography; Interviews; Index.

About the Author

Regine Andersen is a Senior Research Fellow of The Fridtjof Nansen Institute, Norway.
