Transit Oriented Development: Making it Happen brings together the different stakeholders and disciplines that are involved in the conception and implementation of TOD to provide a comprehensive overview of the realization of this concept in Australia, North America, Asia and Europe. The book identifies the challenges facing TOD and through a series of key international case studies demonstrates ways to overcome and avoid them. The insights gleaned from these encompass policy and regulation, urban design solutions, issues for local governance, the need to work with community and the commercial realities of TOD.
